PRELIMINARY AMENDMENT TECH CENTER 1600/2900

United States Patent and Trademark Office
P.O. Box 2327
Arlington, VA 22202

Dear Sir:

Applicants respectfully request that the Preliminary Amendment provided below be entered into the record for the present case.

IN THE SPECIFICATION:

Please delete paragraph 0040 on page 15 , and replace it with the following substitute paragraph:

--As disclosed herein, the propensity of the non-oligomerizing fluorescent proteins of the invention to oligomerize is reduced or eliminated. In one embodiment, the propensity of a non-oligomerizing fluorescent protein to oligomerize is reduced or eliminated due to operatively linking a first monomer of a fluorescent protein to at least a second monomer of the fluorescent protein, thereby forming an intramolecular 'dimer', 'trimer' or the like. Such operatively linked homopolymers, which are referred to herein as "non-oligomerizing tandem dimers," have a substantially reduced ability to form intermolecular oligomers. Such non-oligomerizing tandem
